

- A stable internet connection is required.
- Install the app for easy installation of setting profile.
- For the installation without using the app, have your computer or another smartphone in addition to the iOS device you are using read the QR code.
- You can use it from the day you set (activated).

STEP 1

After applying for the service, you will receive a QR code to take you to the settings.

Please scan via the iPhone/iPad you intend to use the eSIM with.

- Please ensure to load the QR code **via the intended iPhone/iPad.**

- The QR code can be loaded via the **default camera.**

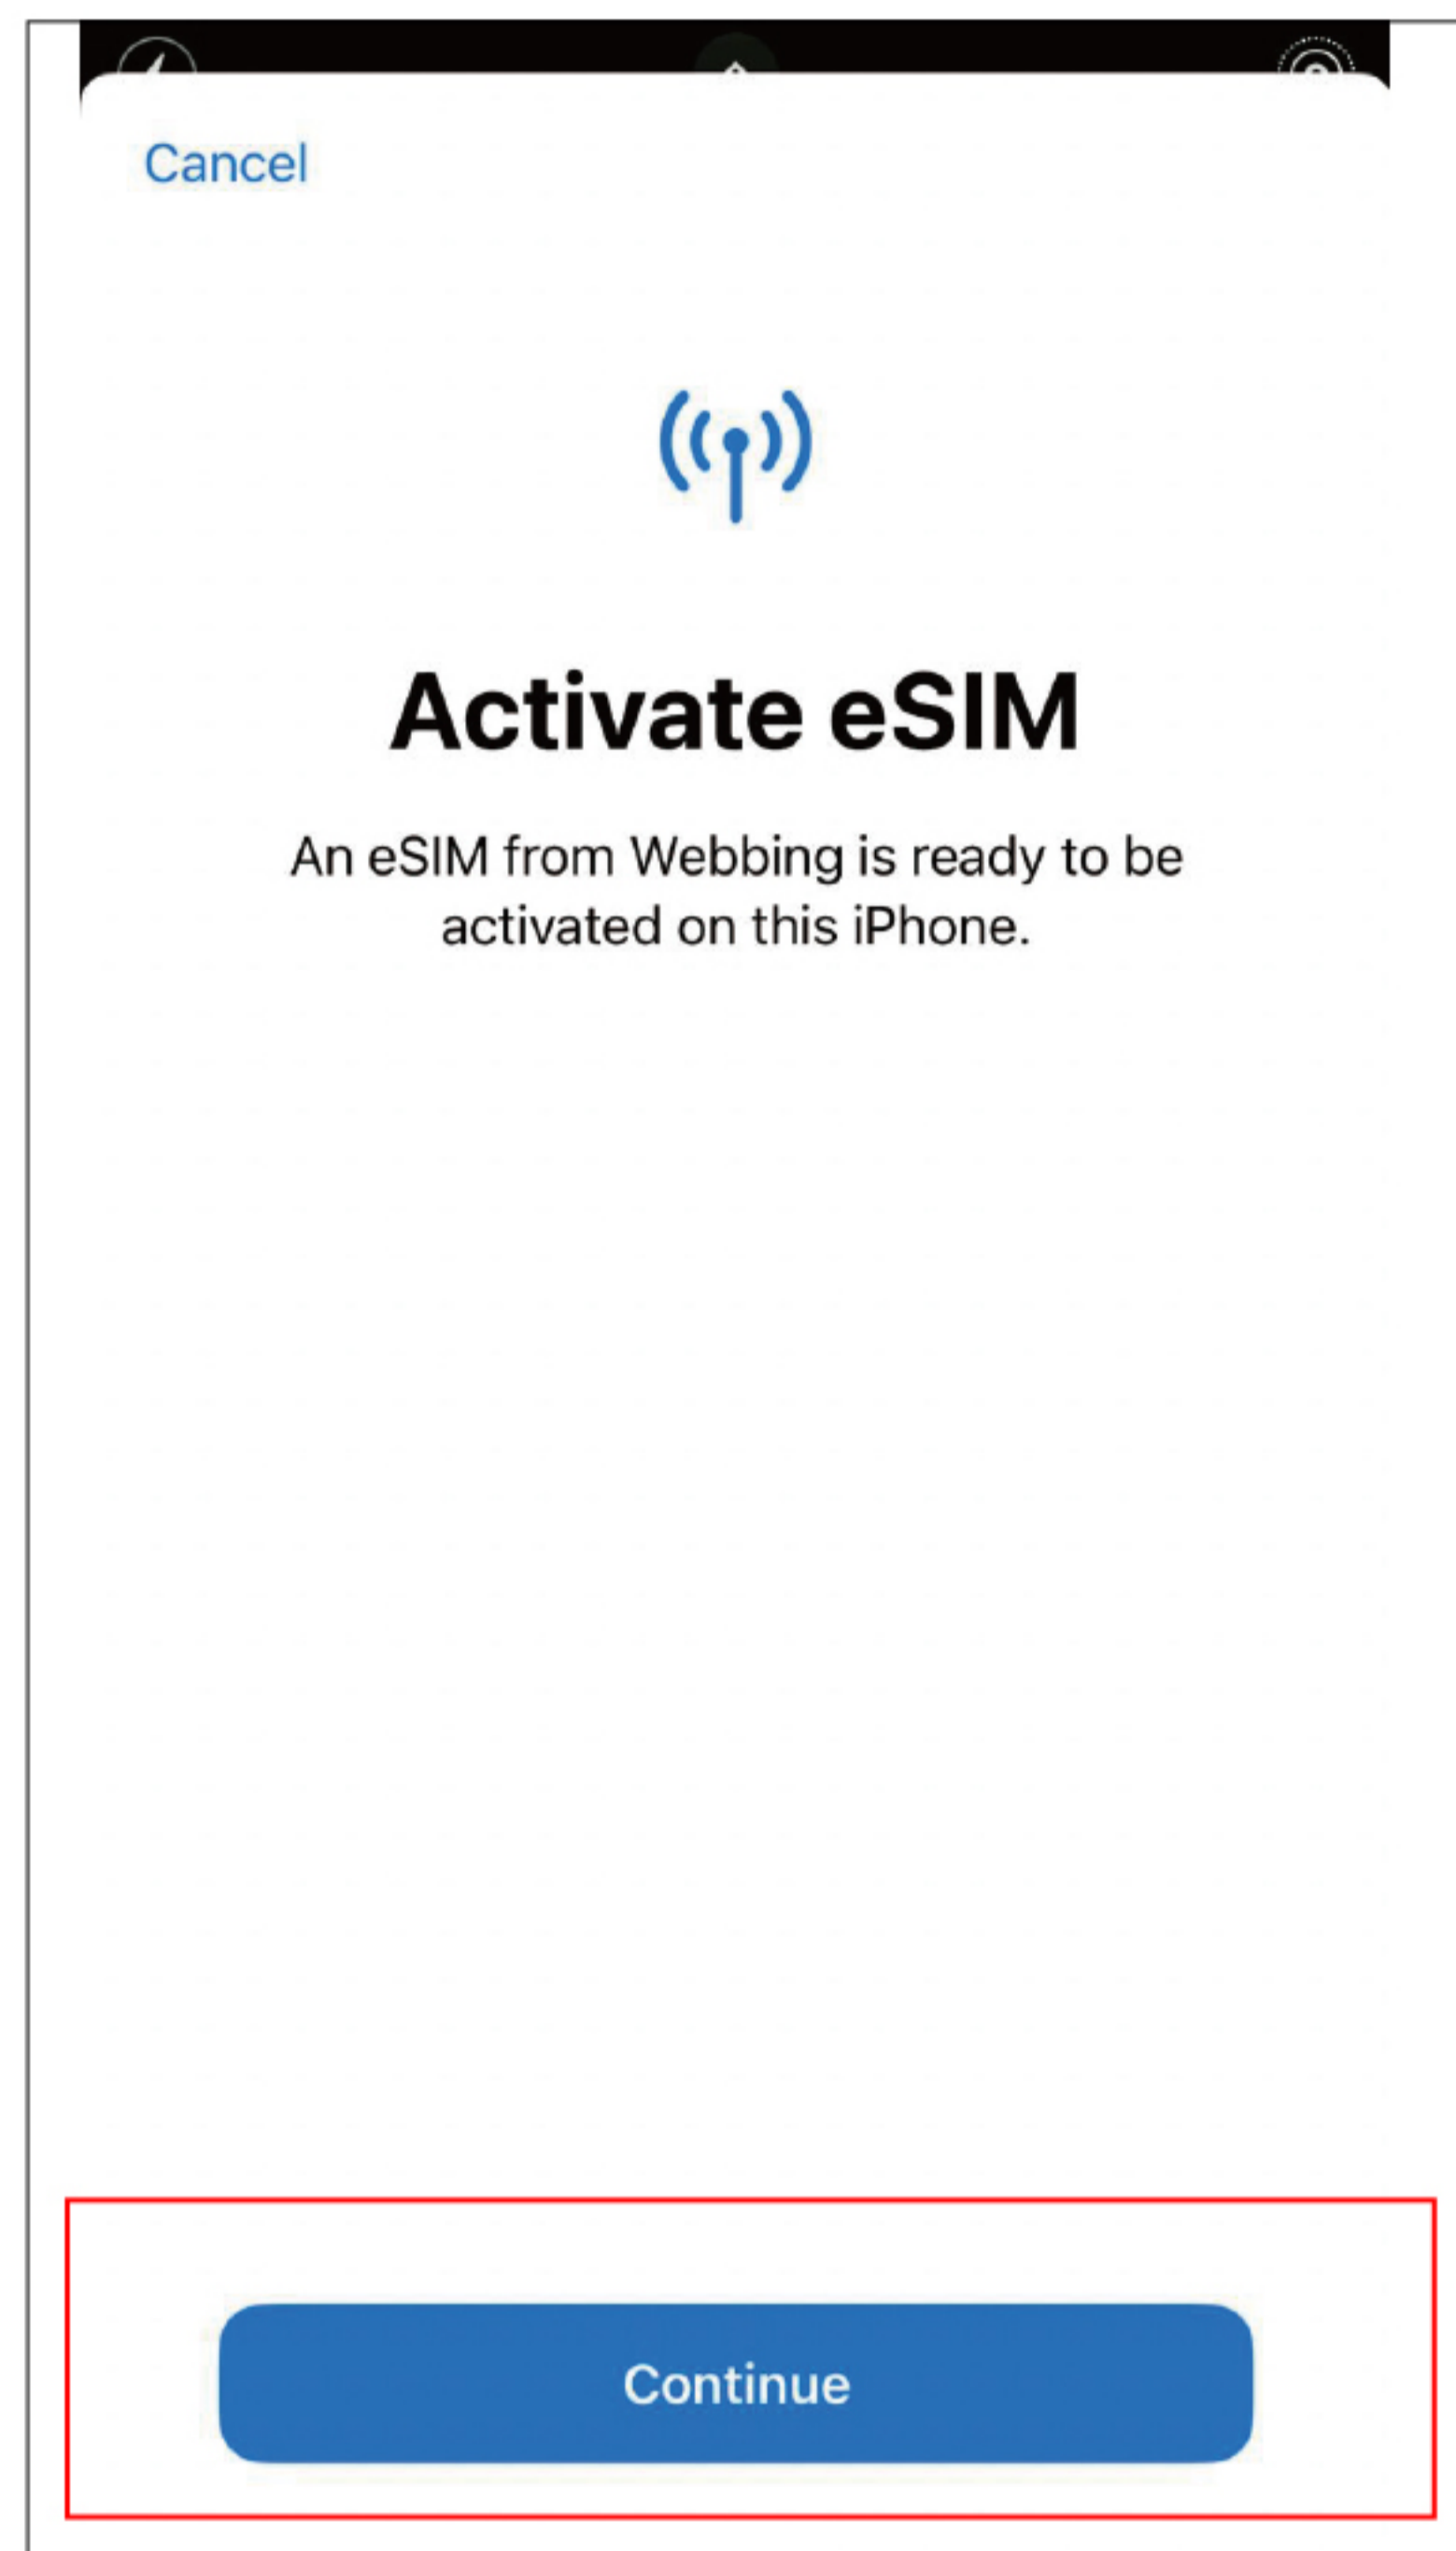

※iOS version 13 or later. Those who have version 12 or lower are required to update prior to loading.

- This special QR code cannot be loaded via general QR code apps.

- In situations where preparing a separate device (i.e. computer or smartphone) to load the QR code is difficult, you can send a screenshot to a nearby family member or friend to display for you, or print out the code.

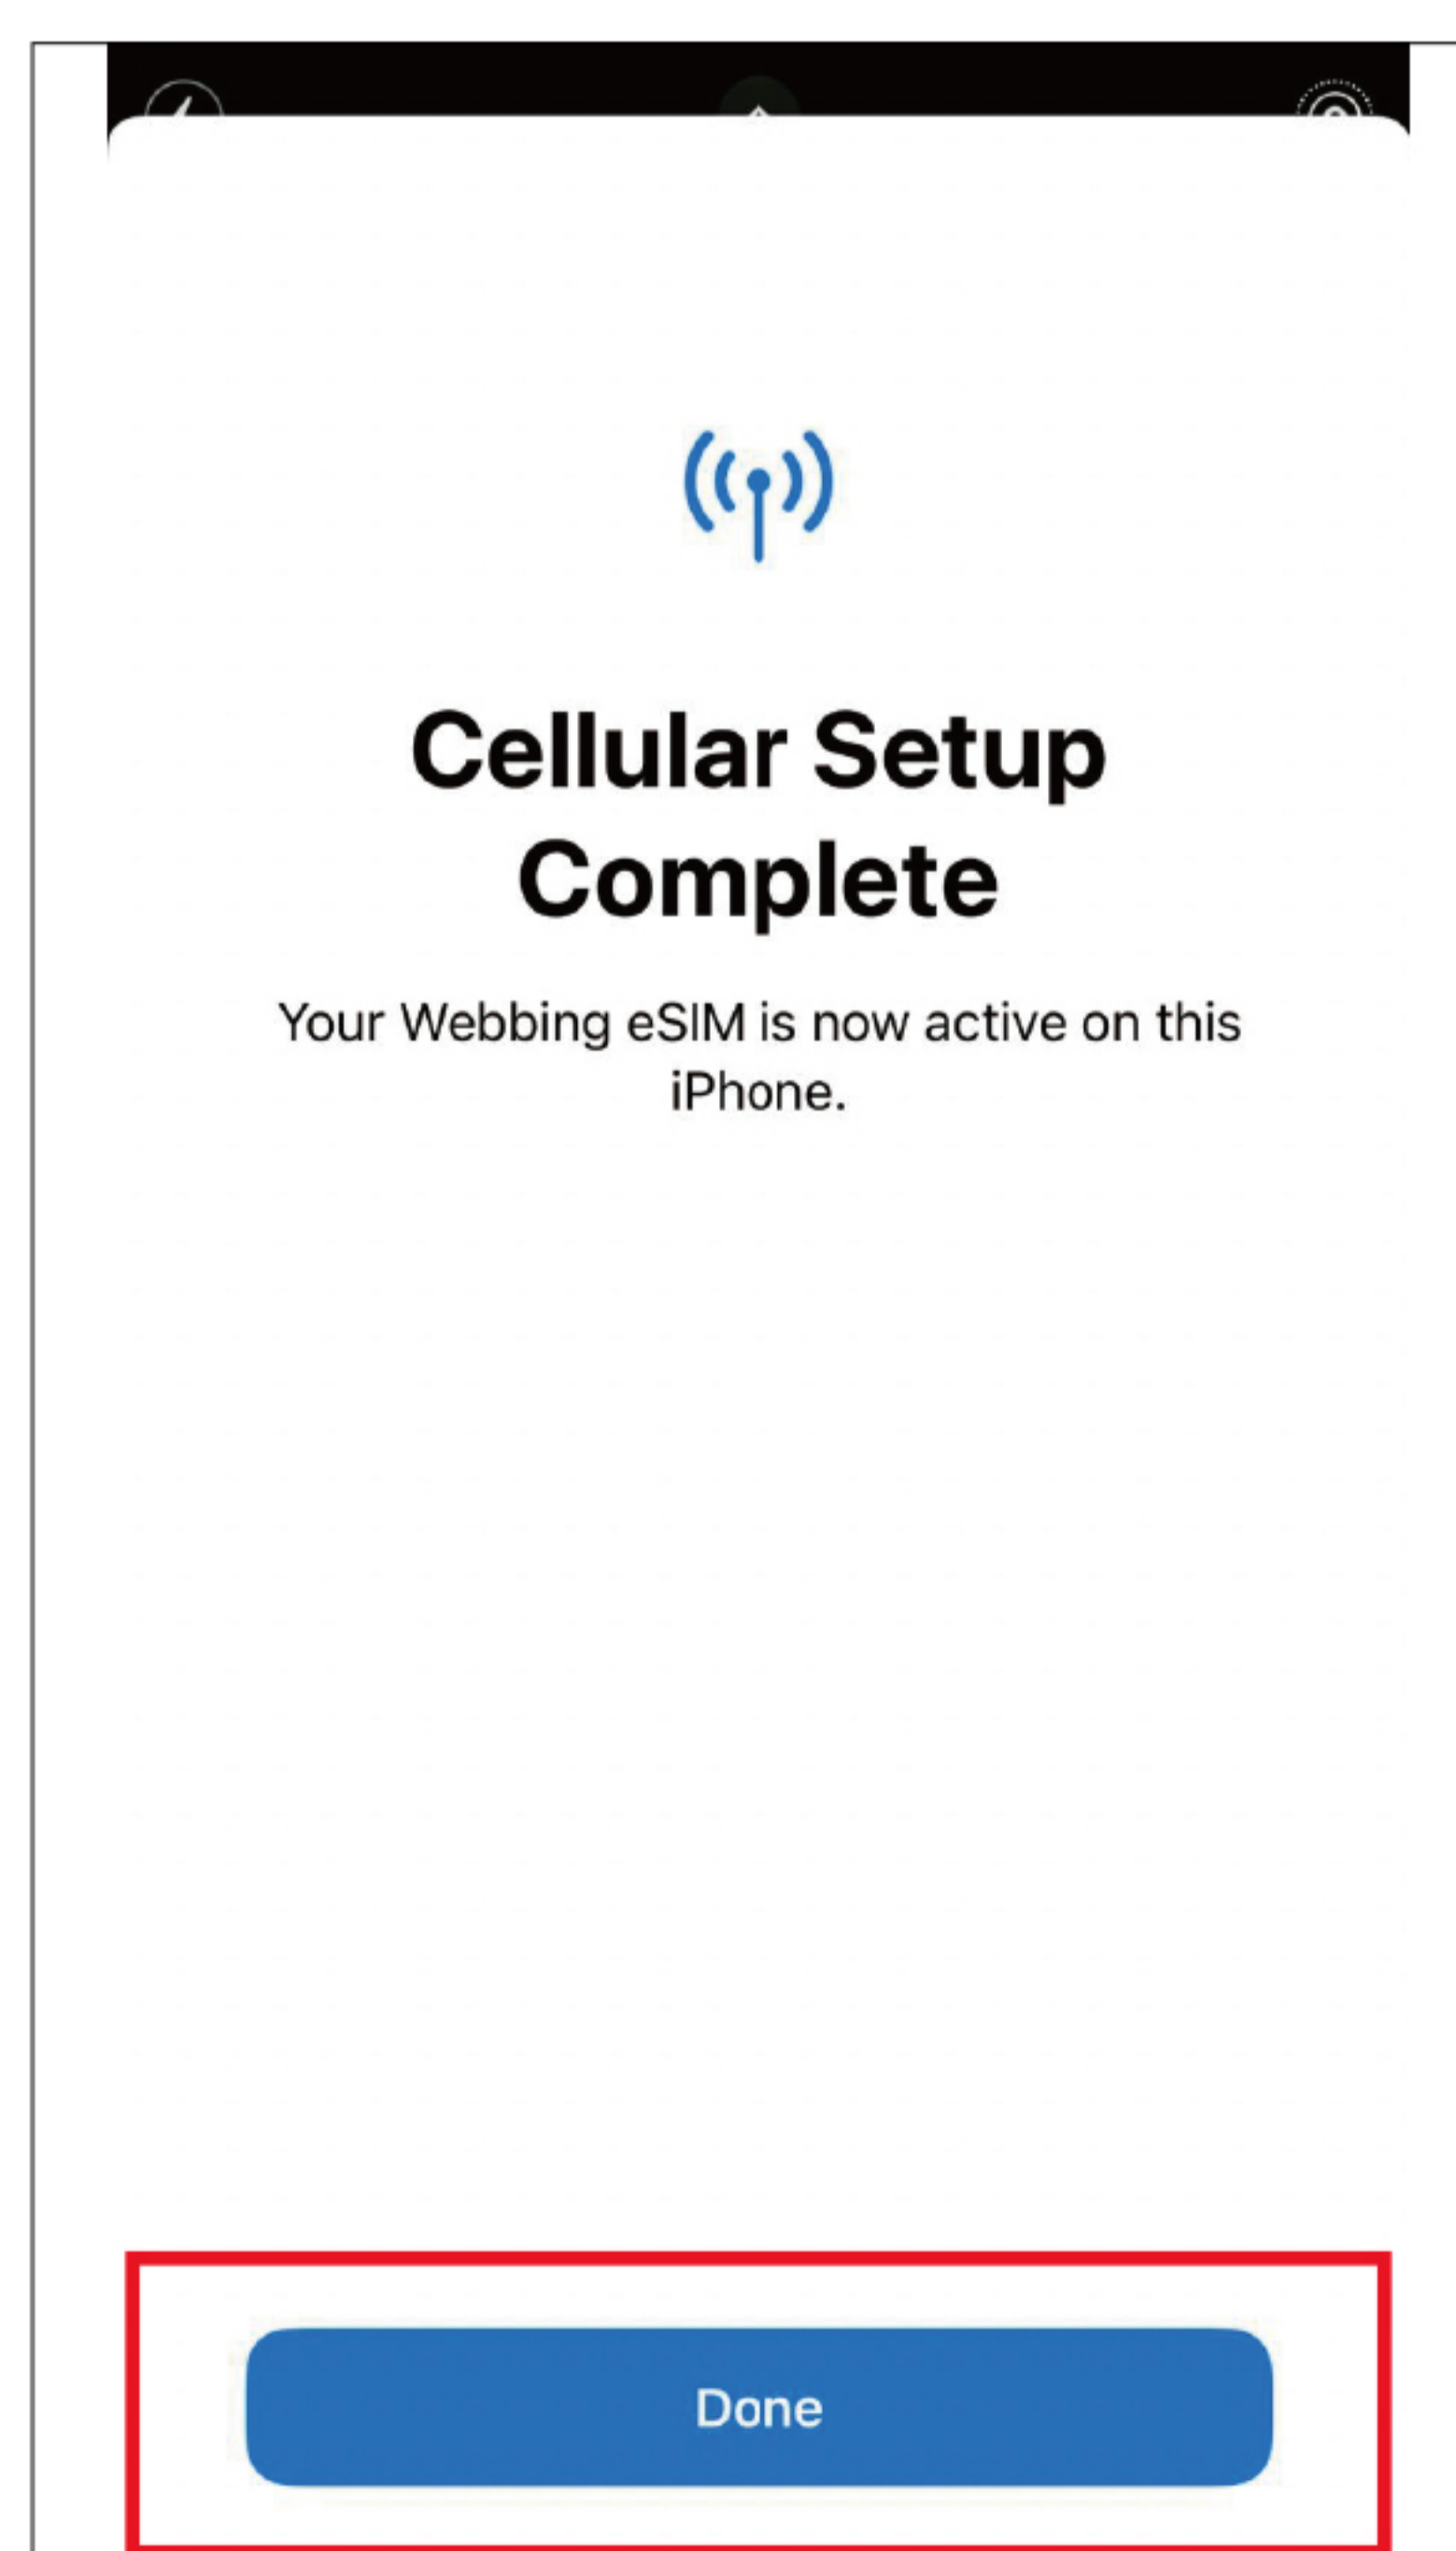

STEP 2

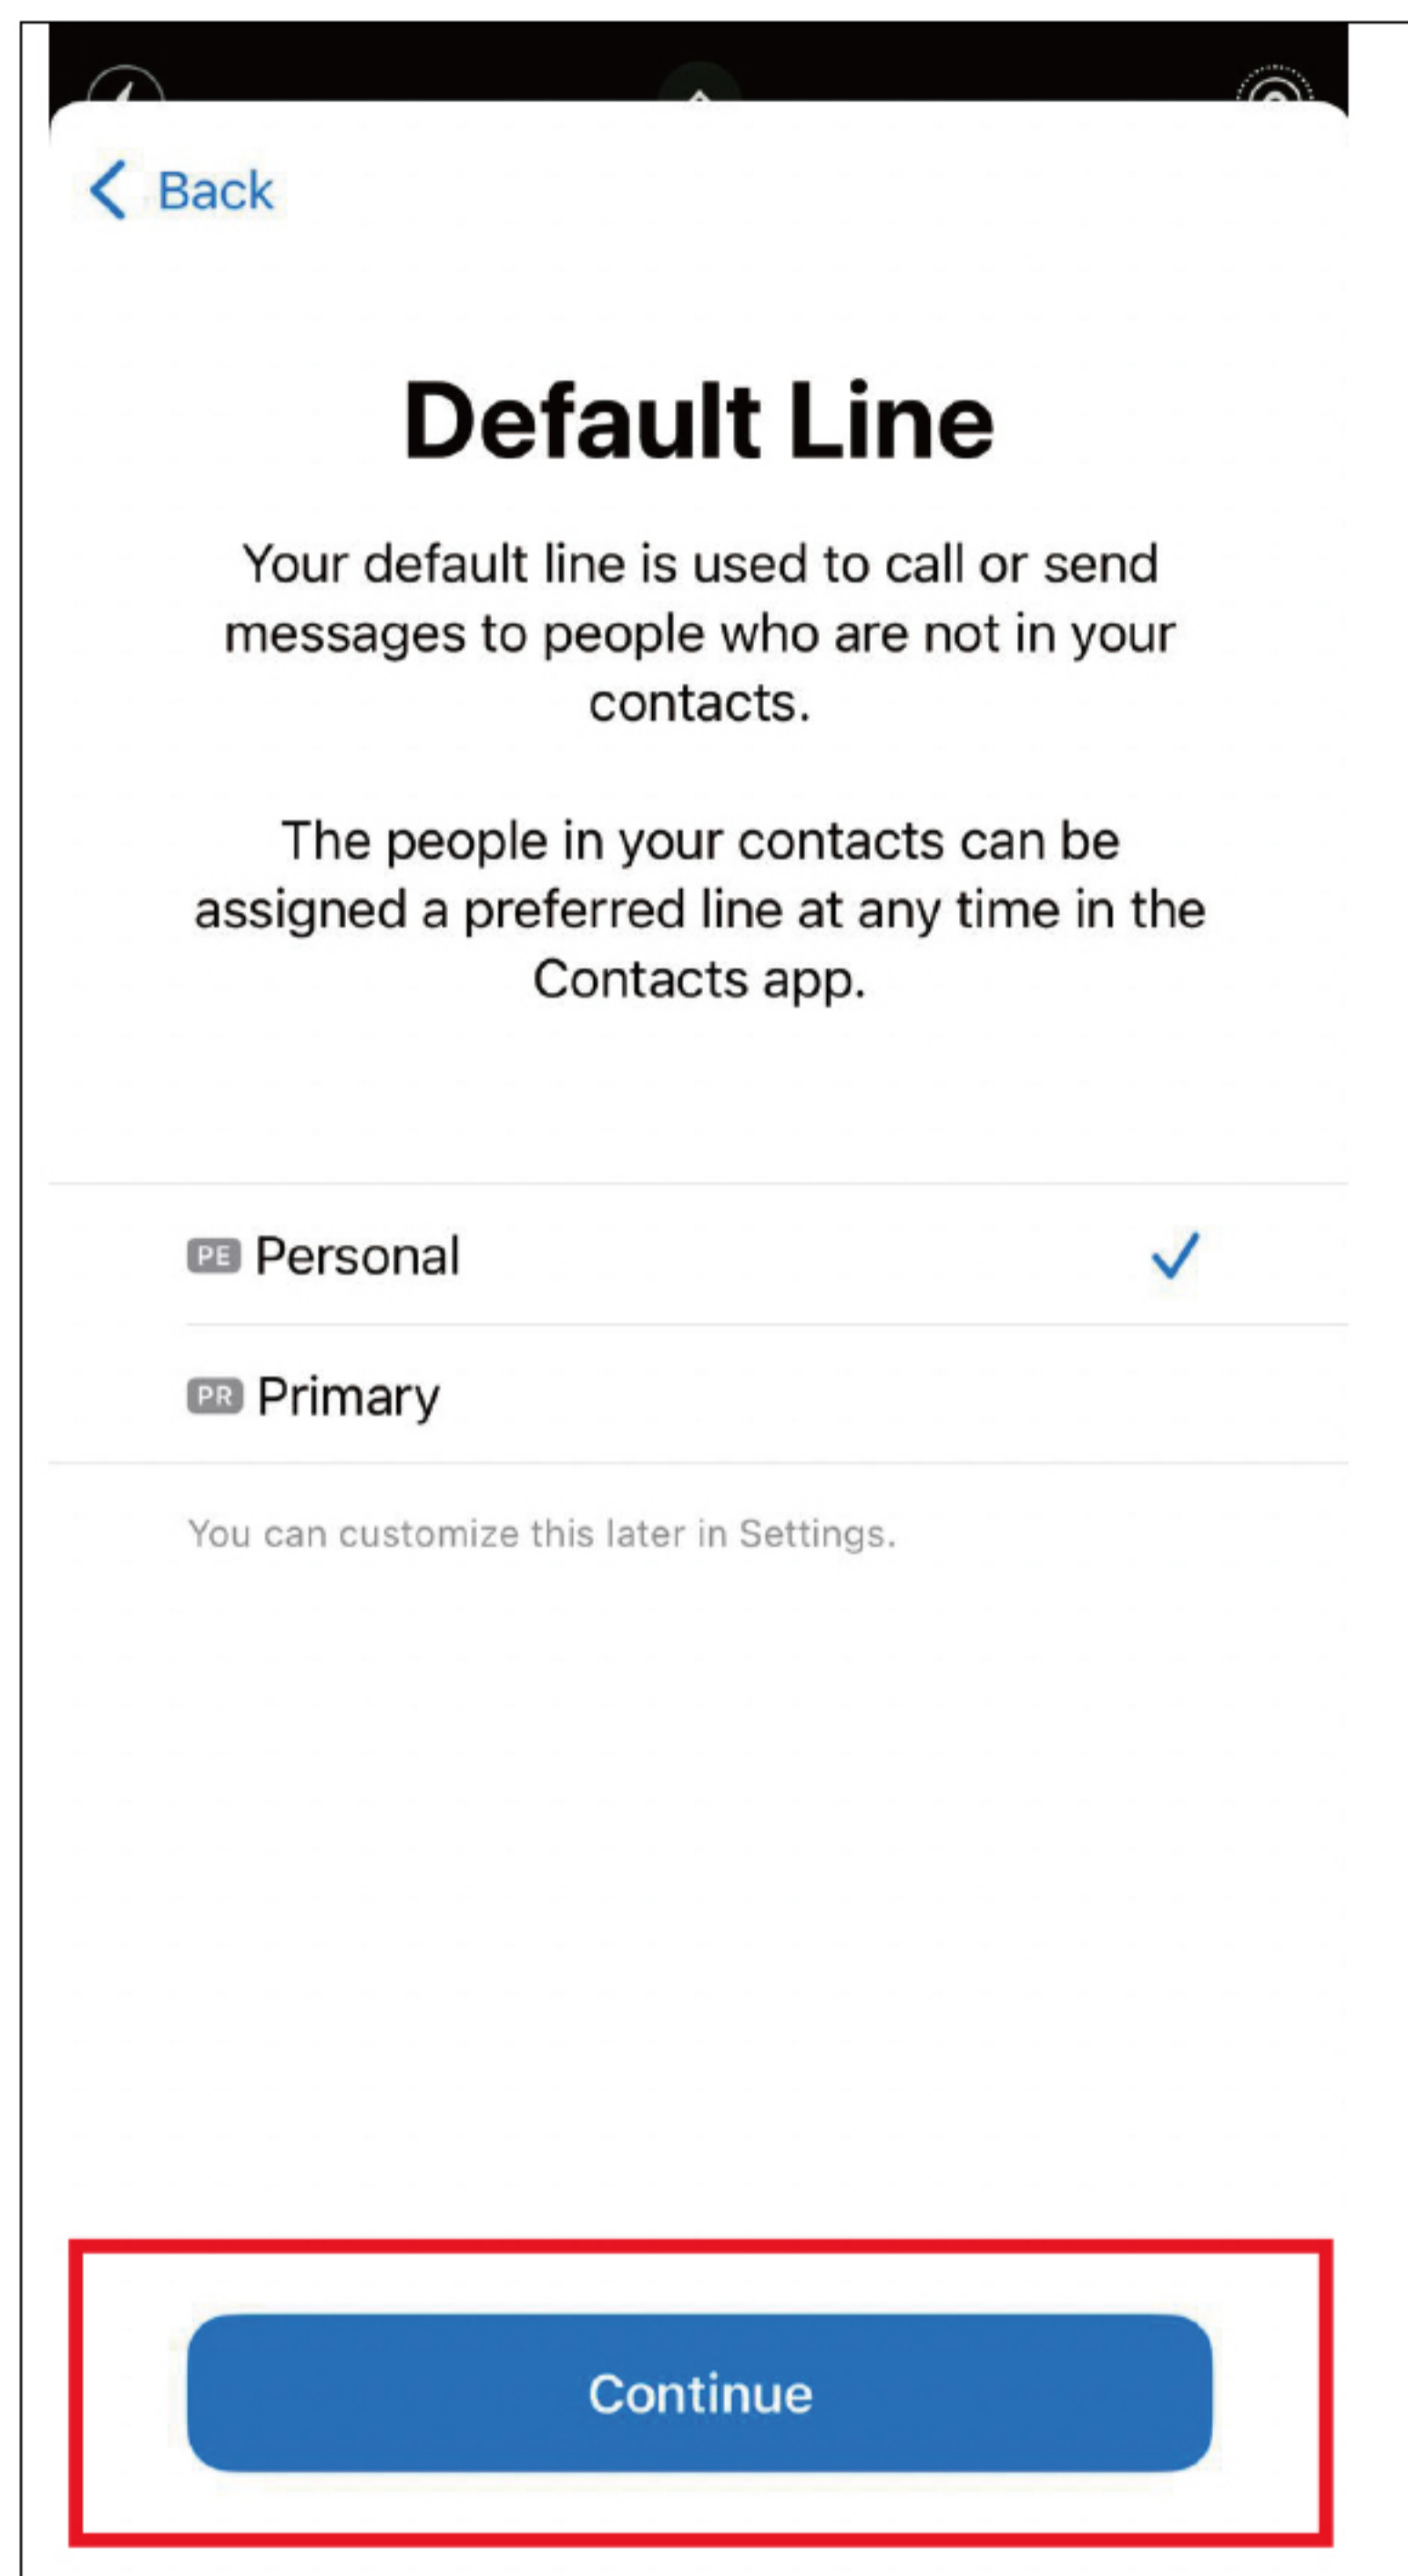

Tap on "Continue" to begin installation.

STEP 3

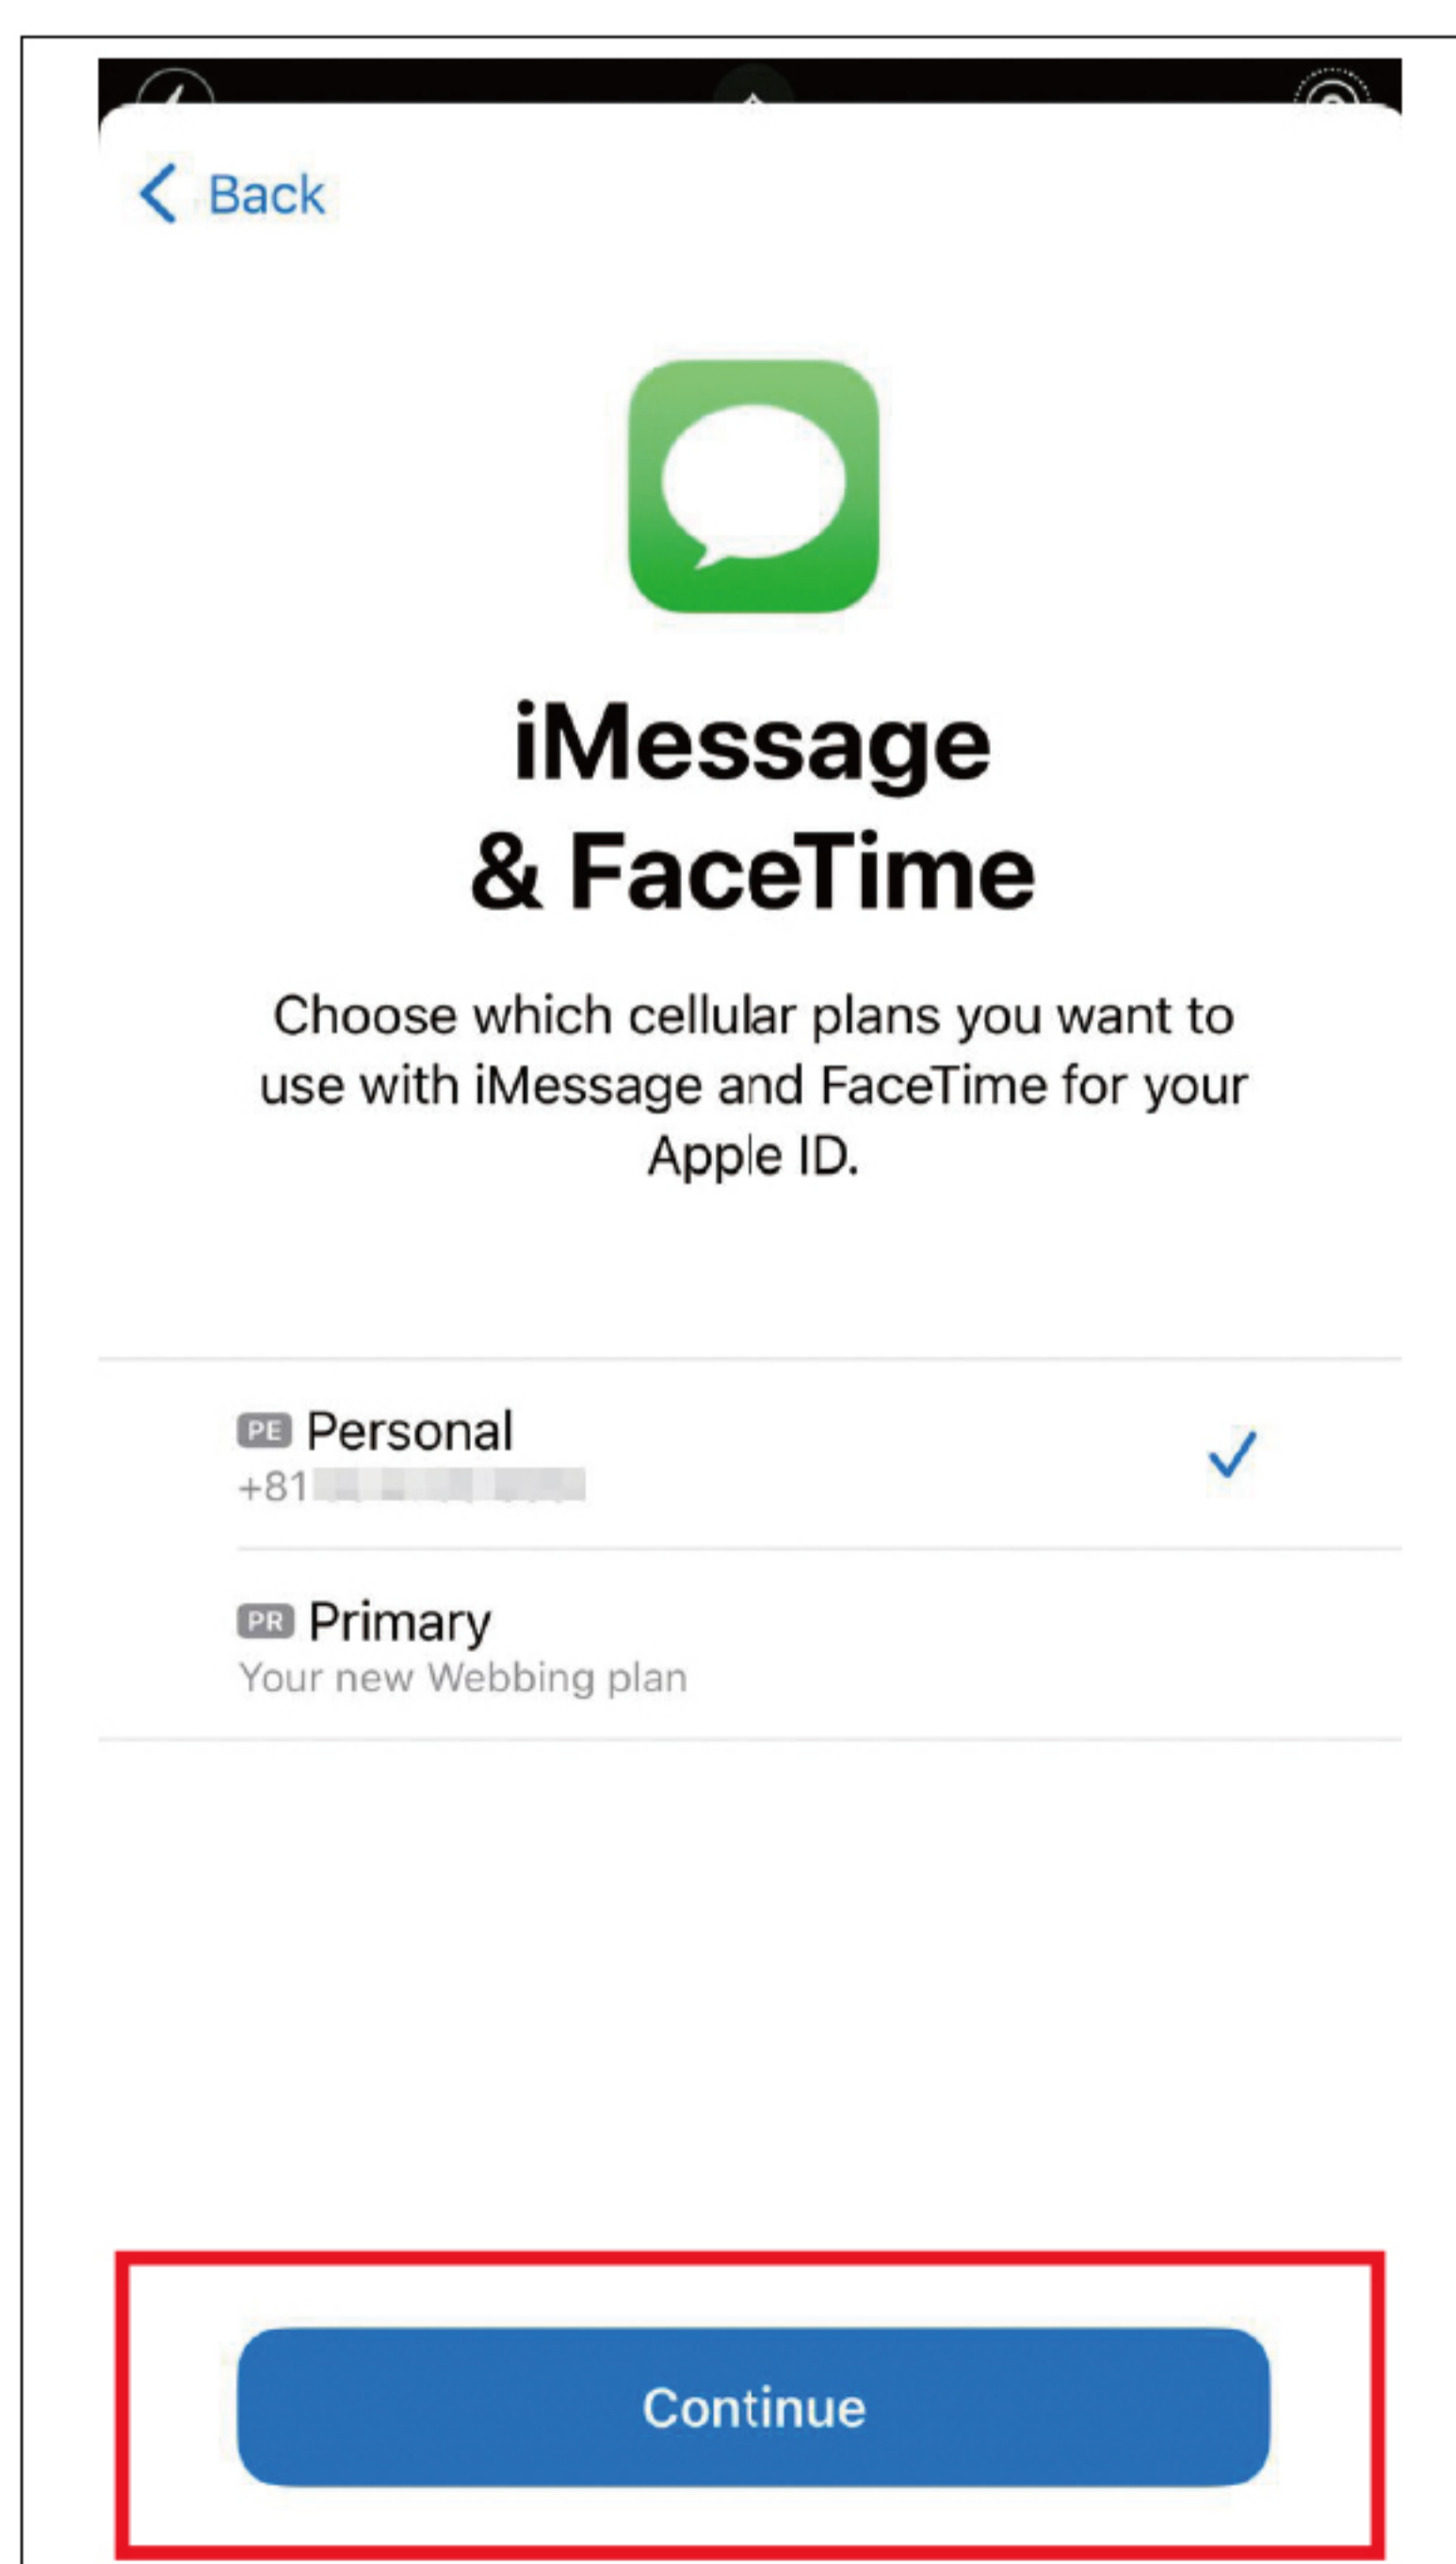

Please tap "Done".

STEP 4

Select your default line.
For immediate use, choose
the added eSIM (selection
below).

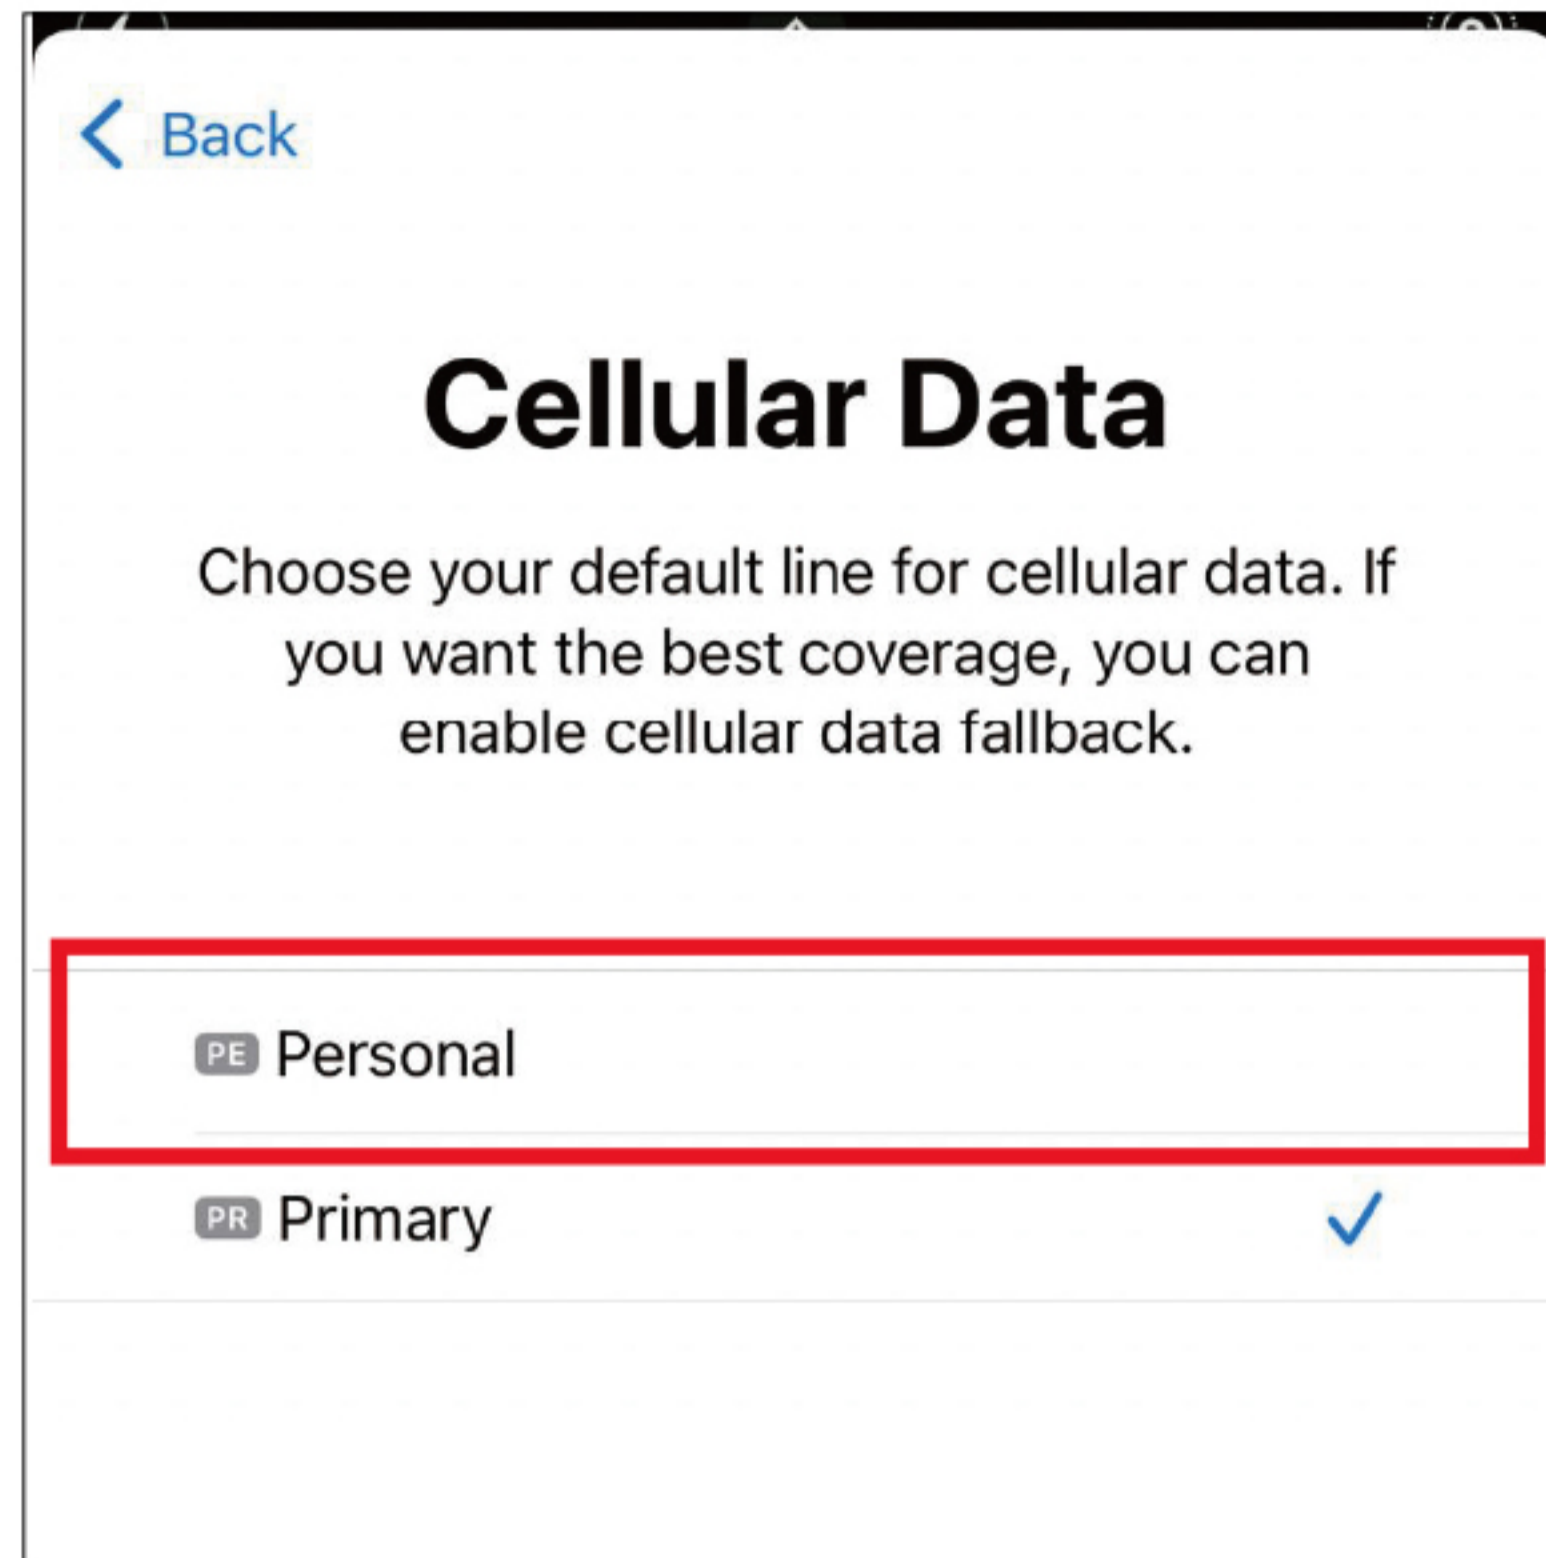

STEP 5

Tap "Continue", as we will not
need to configure iMessage or
FaceTime.

✳️ This setting can be edited later.

STEP 6

This is where we will set our cellular data.

If you wish to use your eSIM immediately, please select the option below.

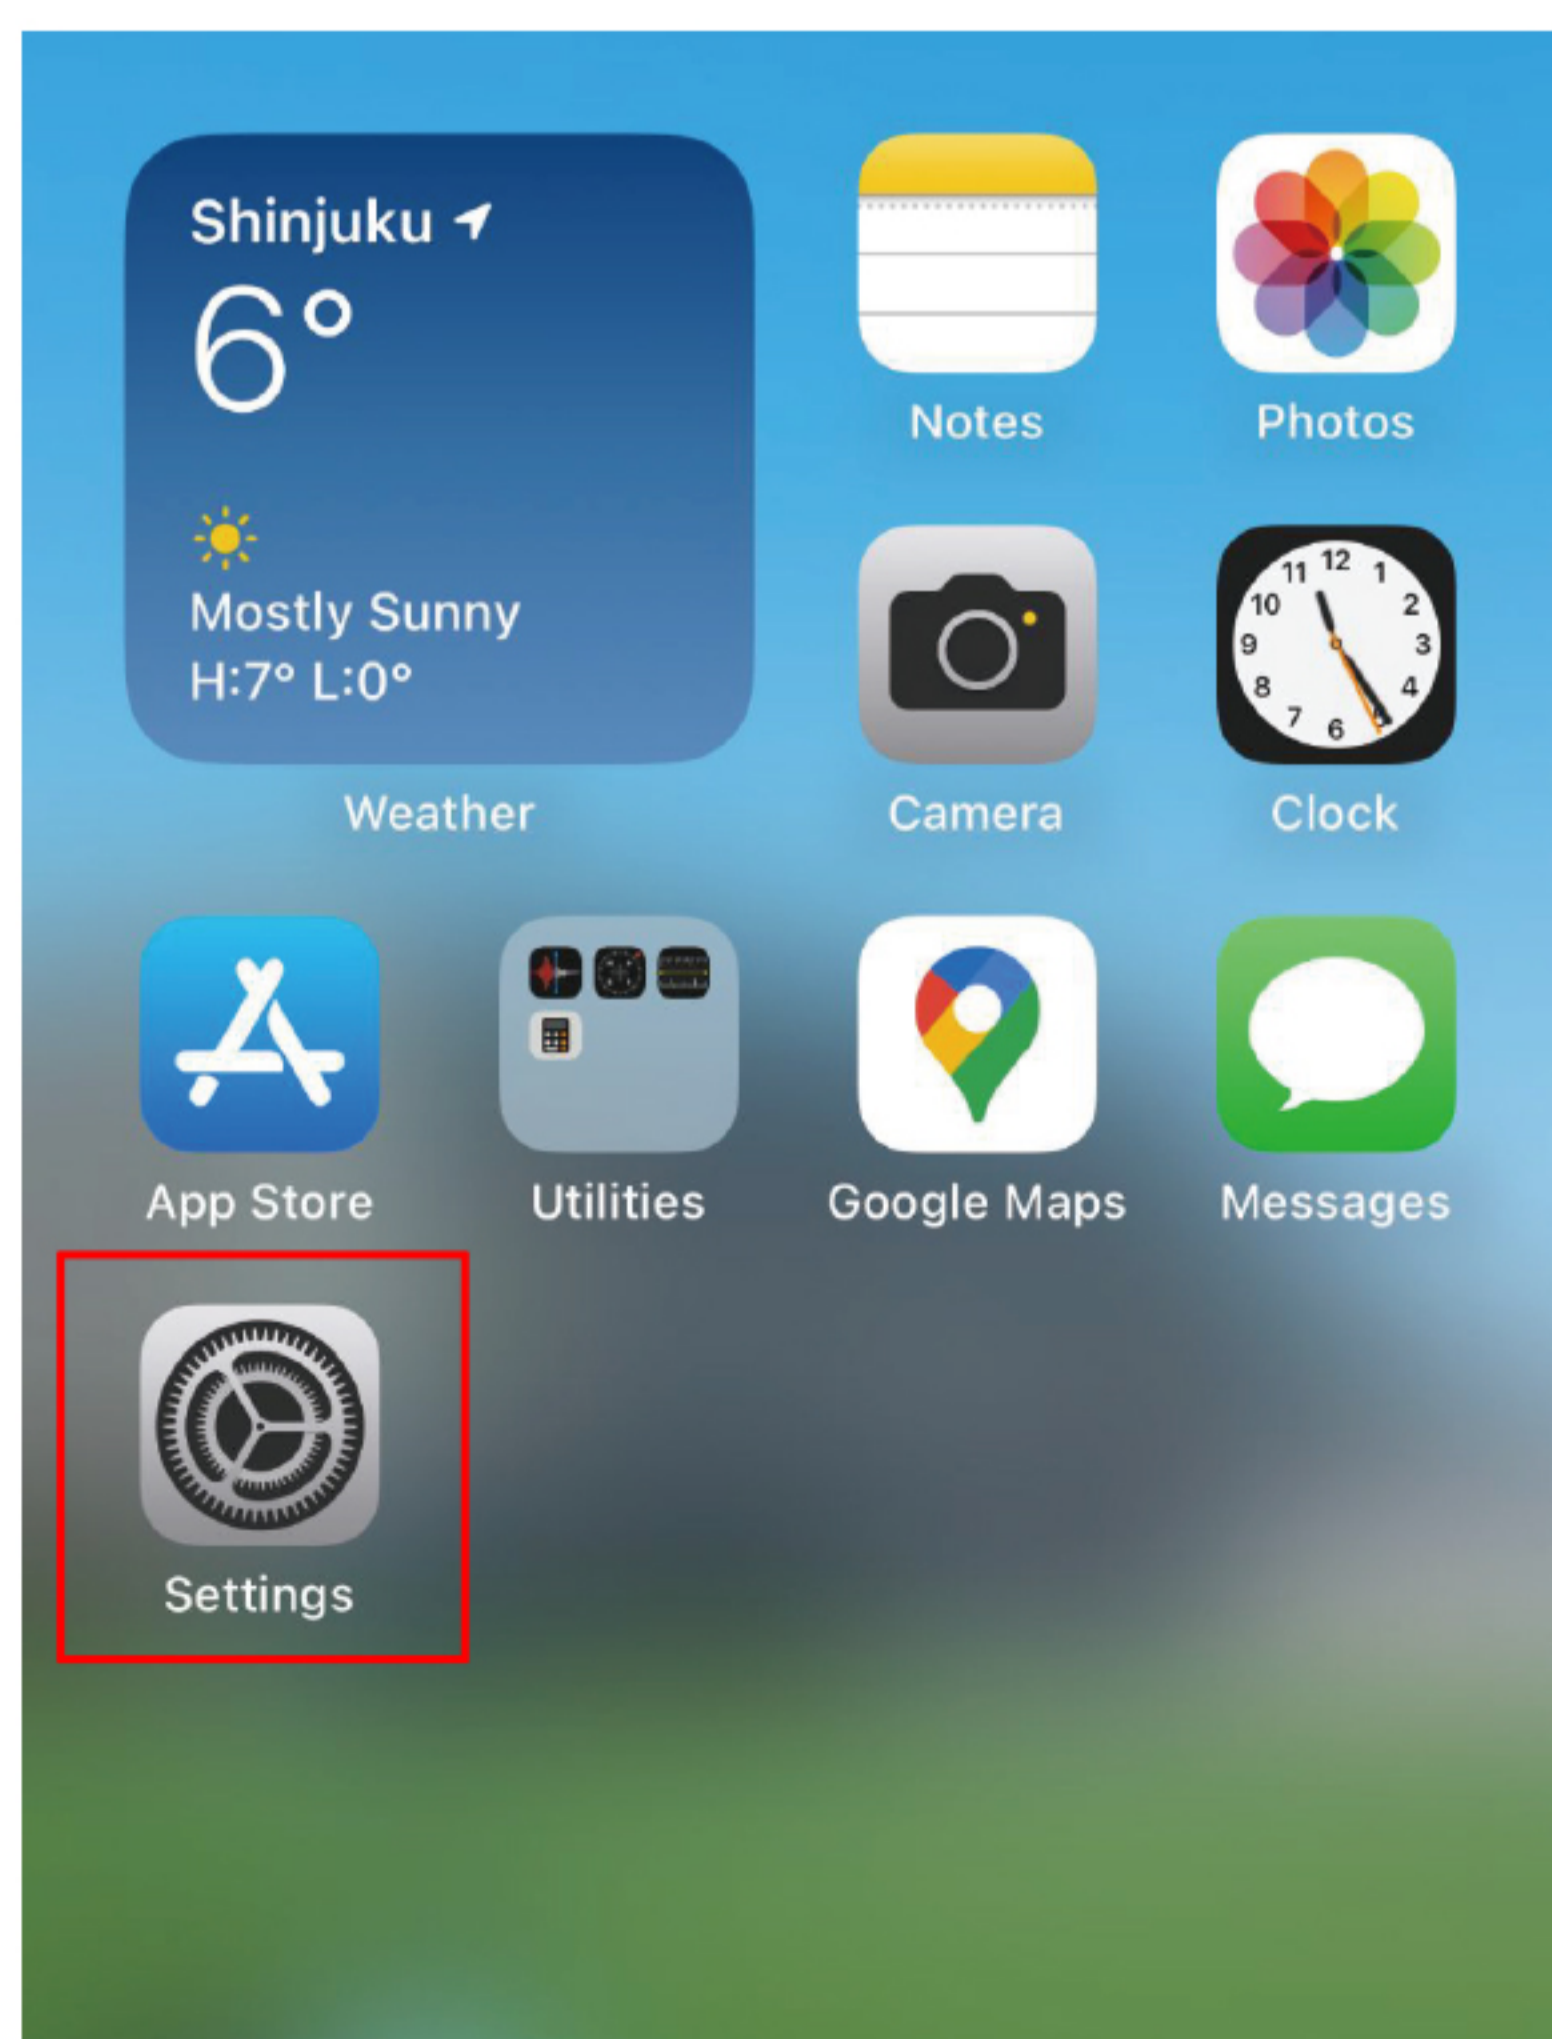

This can be edited later.

Installation Complete.

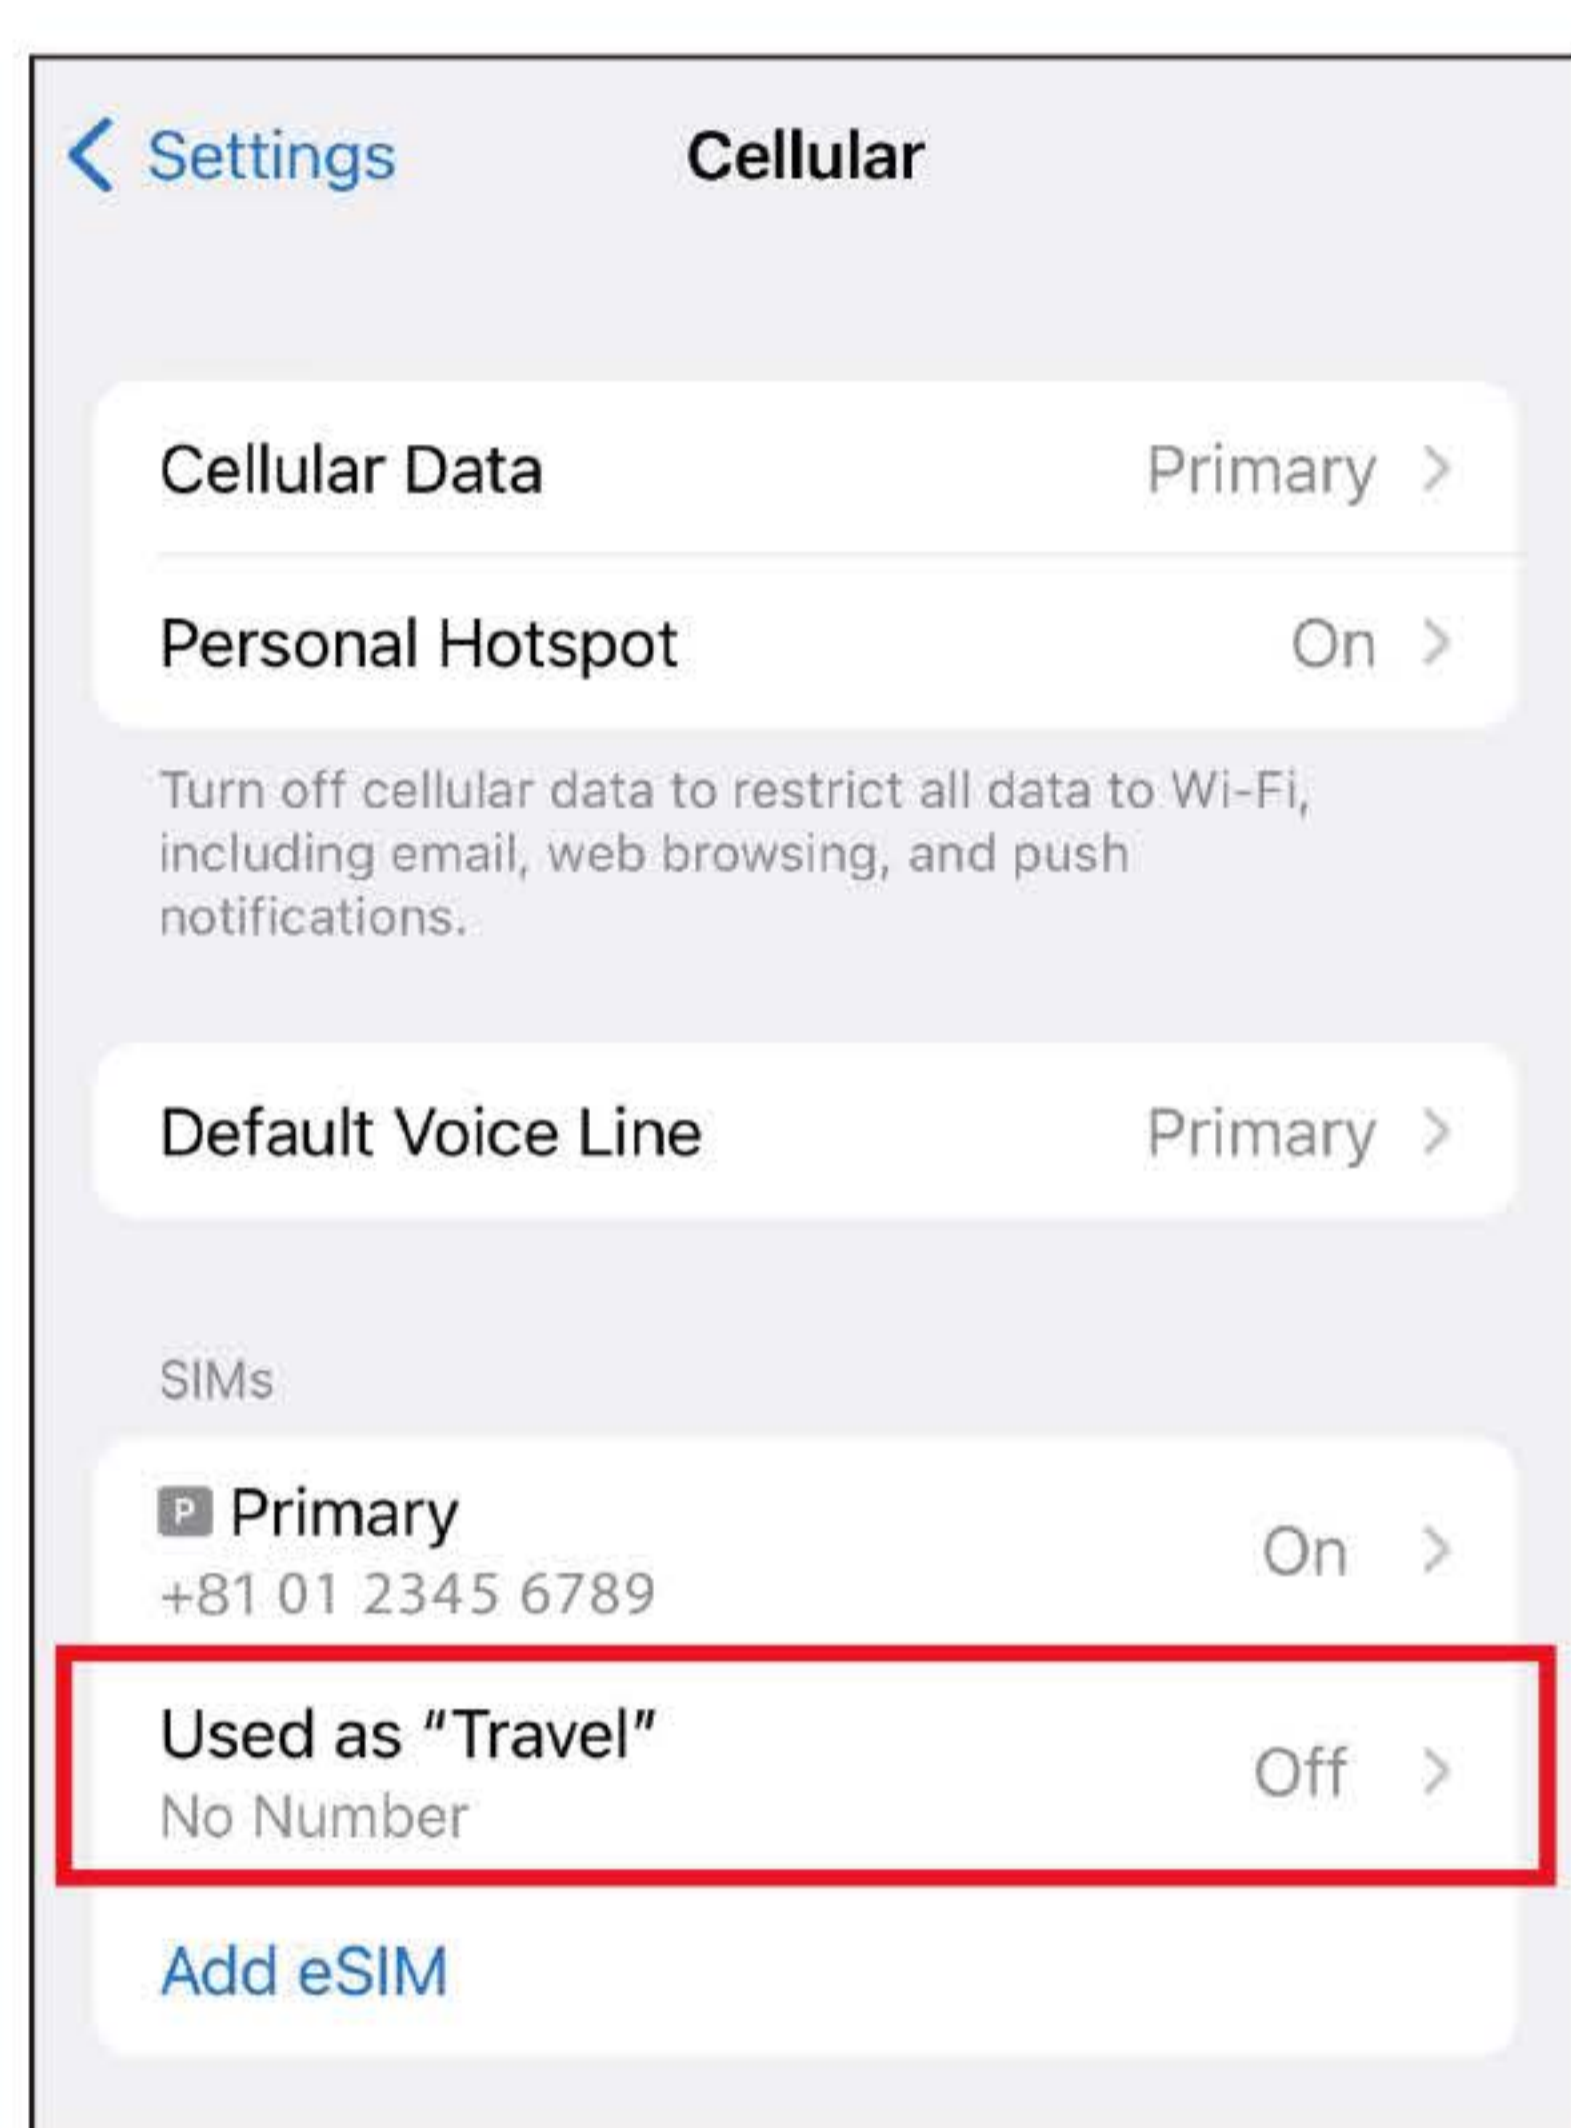

View/Edit Settings

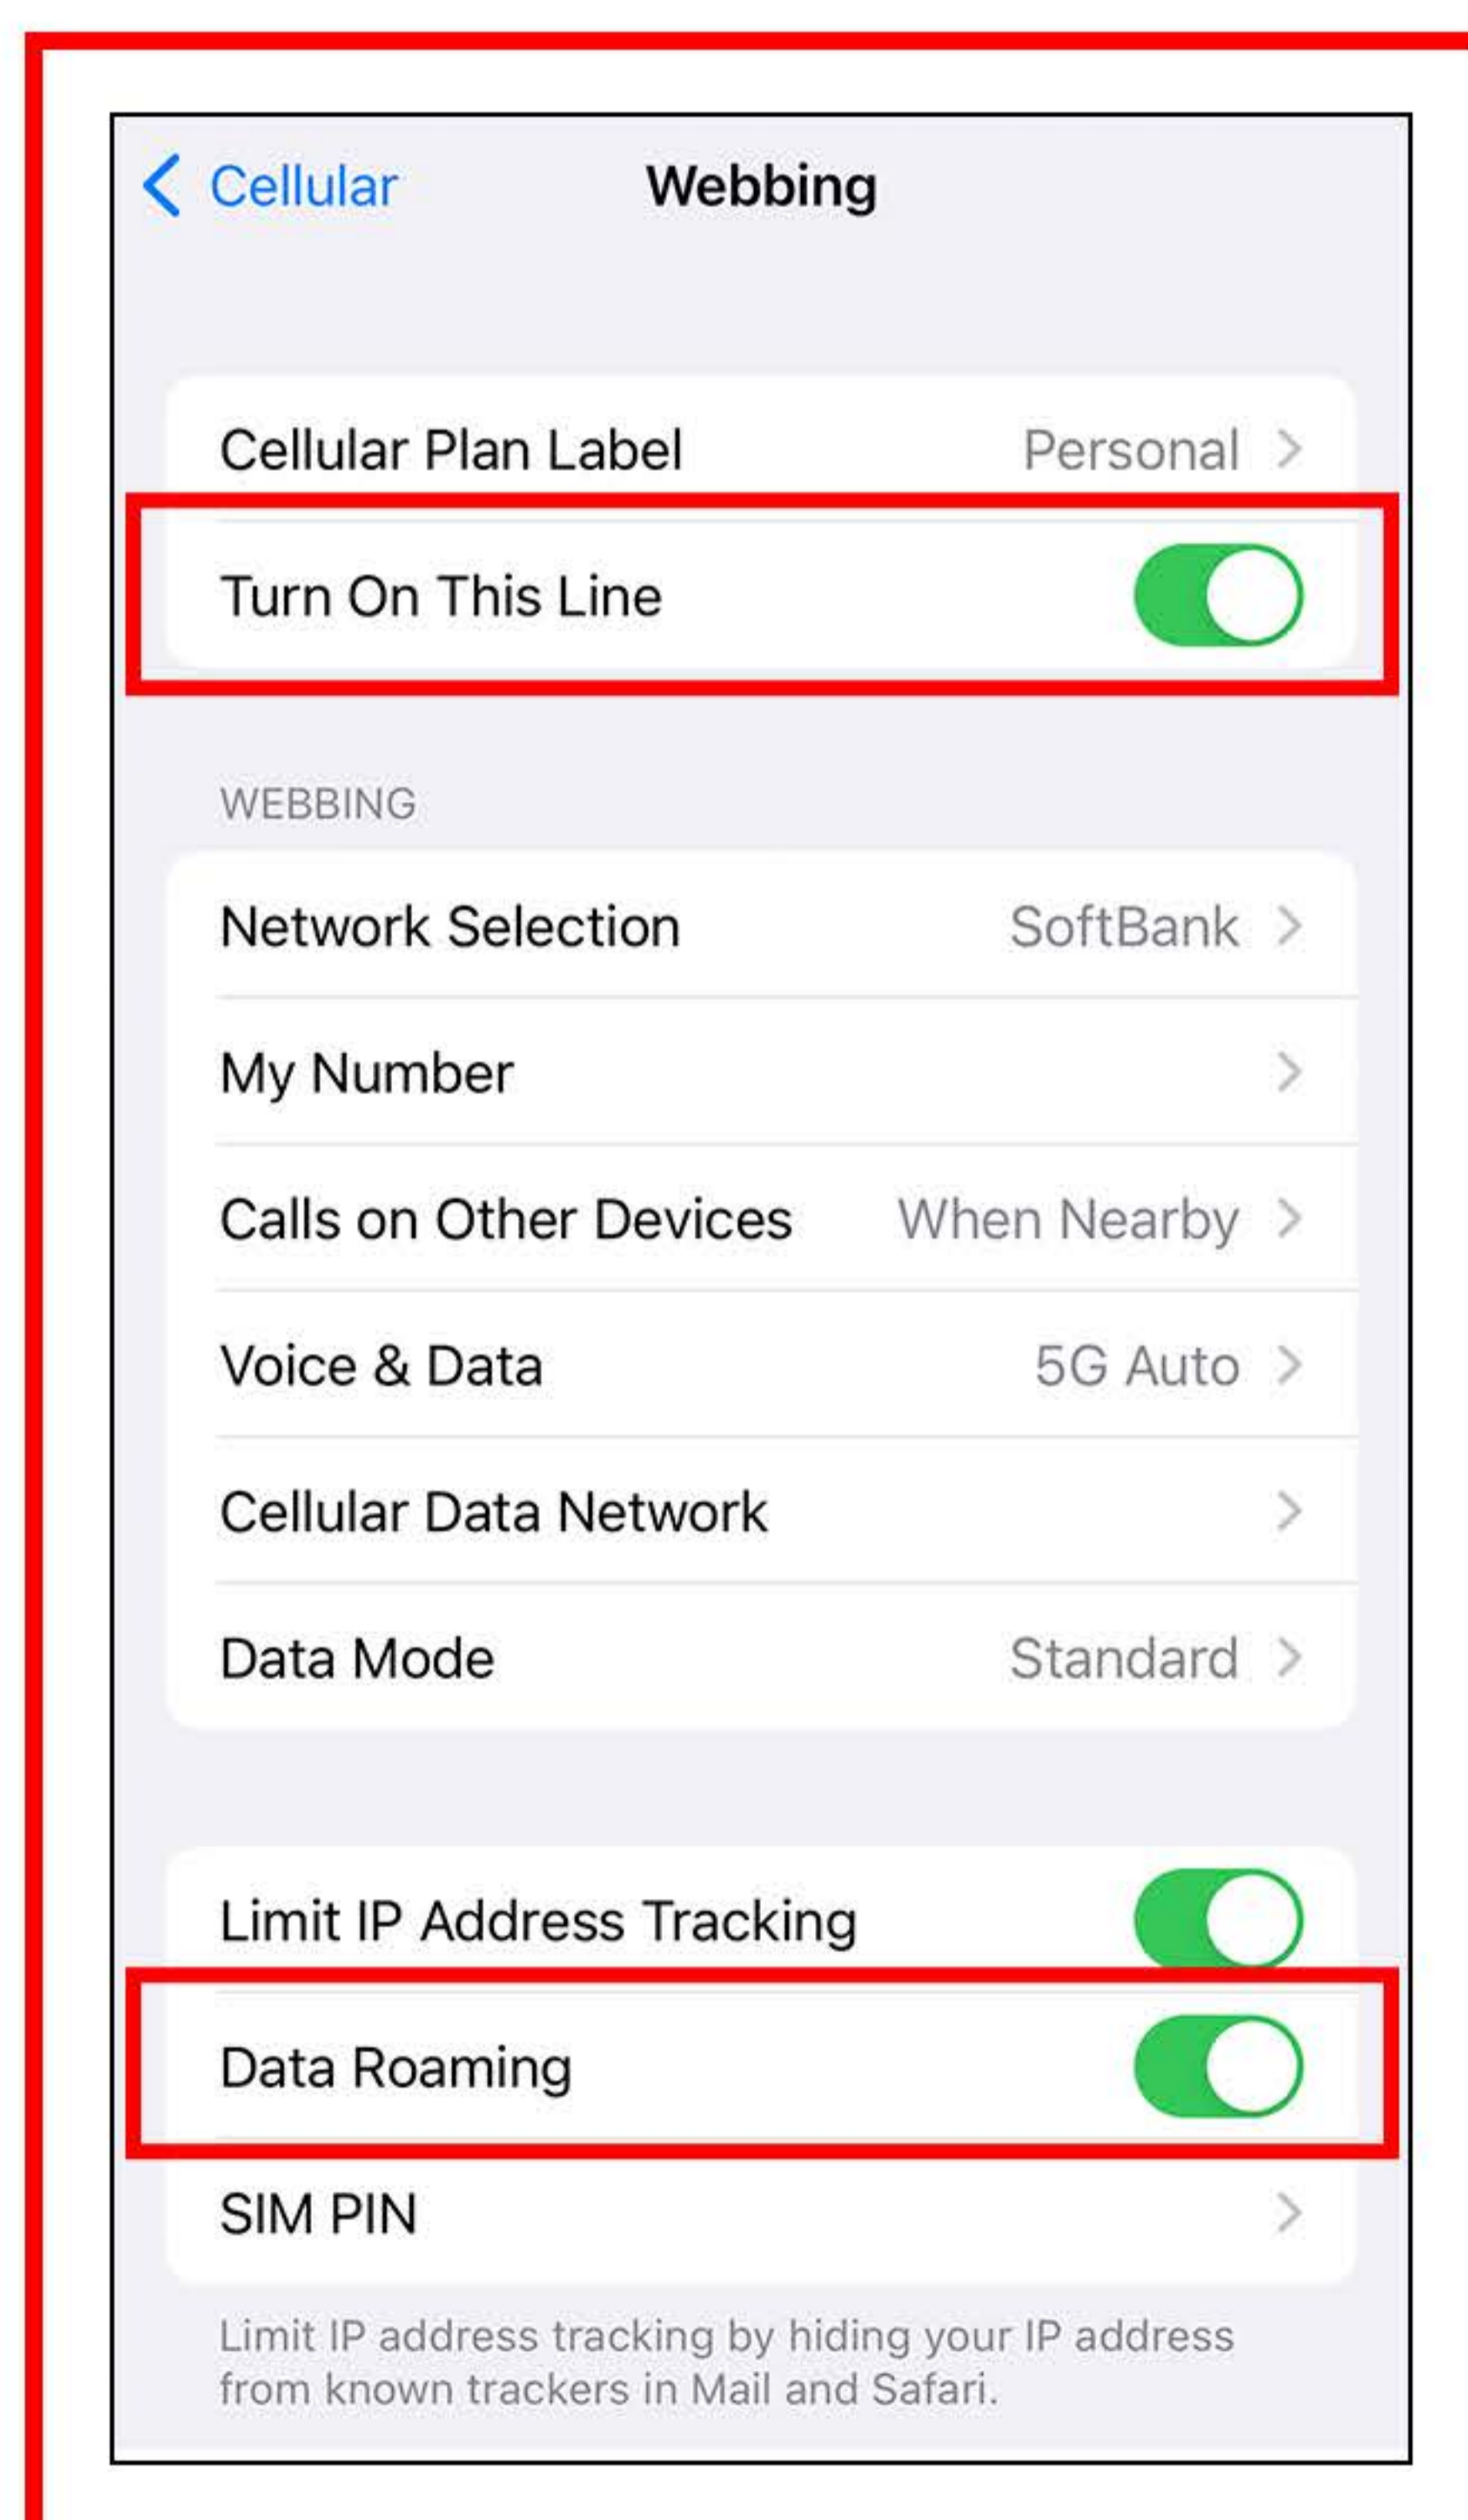

1. Tap on "Settings".

2. Tap on "Celluar".

3. Tap on your newly added eSIM.

4. Enable/disable your eSIM here. and turn on "DateRoaming"

eSIM setup is now complete.
Instructions may vary depending on your specific device settings, OS, update version, etc.
